Sperm freezing for transgender patients

At the Hull IVF Unit we offer sperm freezing for patients wishing to undergo gender reassignment. Fertility preservation is an important option that should be offered to all patients changing gender, ideally before they commence their treatment. Establishing their parenthood goals can be difficult and therefore it is important to recognise that transgender individuals may have the same desire for their own biological children in the future.

Please contact the Hull IVF Unit for more information on the referral process.

Fertility check up

The Hull IVF Unit offers a comprehensive range of fertility tests to give individuals or couples a full assessment of their current fertility and probability of conceiving in the future. It can offer peace of mind and could provide fast-track access to expert advice. Individuals or couples can refer themselves directly to the Unit and an appointment made for their chosen assessment.

Prices range from £250 to £680 and all include a personal results package and the opportunity for support counseling.

Important notices

User guidance

An information pack is available on our website and via the Patient Information Portal (PIP) for guidance on Andrology referrals.

On-site facilities

The Hull IVF Unit has on-site facilities for sample production – this is only available when booked in advance.

Online survey

Please could you take one minute of your time to complete our short online questionnaire **and be in with a chance of winning a box of Hotel Chocolat:** <https://www.surveymonkey.co.uk/r/hullgp2017>
